

Rishiraj Sarkar

Detroit, Michigan | sarkarrishiraj4@gmail.com | linkedin.com/in/risarkar | github.com/risarkar

Cybersecurity professional with consultant-level experience in privacy, safeguards, and change control at Deloitte. I also bring hands-on C++ and Python development experience. I am pursuing an M.S. in Cybersecurity and Information Assurance, with work across secure connected systems, SIEM pipelines, and AI security.

EXPERIENCE

Research Assistant | Trustworthy AI-driven IoT Lab, University of Michigan-Dearborn | March 2026 to July 2026

- Developed prototypes for encrypted communication between moving vehicles using sensors and light, with security considered within hardware constraints.
- Built a machine learning model that maps lightweight sensor data to richer sensing information without adding hardware.

Associate Solution Advisor | Deloitte USI, Bengaluru, India | October 2023 to July 2025

- Built and ran change and issue management processes for a major technology client's privacy and safeguard program. I connected engineering teams with compliance stakeholders.
- Translated GDPR and CPRA requirements into prioritized actions and communicated risk findings and remediation status to technical and business audiences.
- Built a tracking dashboard that reduced manual status reporting. Authored more than 390 assessor-facing documents under strict change control.

C++ Developer | Nevaeh Technology, Kolkata, India | January 2023 to July 2023

- Developed and debugged a Linux high-frequency trading system where correctness, latency, and input validation mattered.
- Owned code for an international exchange integration and resolved critical production defects through root cause analysis.

SECURITY PROJECTS

AI-Based Malware Detection System and Evasion Techniques | Python, machine learning

- Worked with a team to compare machine learning models for detecting malicious Windows executables from behavior traces. I trained and evaluated MLP and XGBoost models.
- Studied adversarial evasion as a next step toward understanding detector robustness and security risk.

Security Homelab and Architecture | SIEM, network security, agentic AI

- Run a self-hosted lab for network attack and defense drills. I ship logs to Chronicle and Splunk to examine security signals.
- Experiment with local and agentic AI tools for triage and detection workflows.

TECHNICAL SKILLS

Application and network security: Injection attacks, XSS, buffer overflow, DNS attacks, sniffing and spoofing, IAM, encryption, secure SDLC, and trustworthy AI.

Cloud and tooling: Google Cloud Platform, cloud security, Kali Linux, Linux, Chronicle, and Splunk.

Risk and privacy: NIST CSF, ISO 27001, GDPR, CPRA, change control, risk assessment, and risk management.

Programming: Python, C++, SQL, and JSON.

CERTIFICATIONS

Google Cloud Certified Generative AI Leader | Google Cybersecurity Certificate

EDUCATION

University of Michigan-Dearborn | M.S. in Cybersecurity and Information Assurance, Network and Systems Security concentration. GPA: 3.95. Expected May 2027.

Manipal Institute of Technology | B.Tech in Electronics and Communication Engineering, with a minor in Data Science. Graduated 2023.

LEADERSHIP AND ACTIVITIES

Co-Leader, Google Developers Group Detroit | January 2026 to present. I help organize Michigan DevFest, Hack Michigan, and community summits.
